

Comparison of observable I^{\odot} in g9a-data and g1c-data

- ϕ_{π^+} : the π^+ azimuthal angle in the rest frame of the $\pi^+ \pi^-$ system
- Only statistic errors are shown in g9a-data(FROST).

Comparison of observable I^{\odot} in g9a-data and g1c-data

- FROST data are off butanol

- no distinction between hydrogen and carbon : no dilution factor

The difference : $I^{\odot}(\text{g9a}) - I^{\odot}(\text{g1c})$
